

What is claimed is:

1. A monolithically constituted gasket assembly with a cover for fitting to a case of a hard disk drive unit comprising:

a cover plate constituting said cover having piercing holes at predetermined positions;

a gasket fitted to said cover plate via said piercing holes; and

a ring constituting said cover arranged around an outer periphery of said gasket, wherein:

a gap formed between said cover plate and said ring, and a gap formed between said cover plate and said case for the hard disk drive unit are sealed by said gasket.

2. A hard disk drive unit of which active components are accommodated in a case, wherein:

a monolithically constituted gasket assembly with a cover for fitting to the case comprises a cover plate constituting said cover having piercing holes at predetermined positions, a gasket fitted to said cover plate via said piercing holes and a ring constituting said cover arranged around an outer periphery of said gasket, wherein:

a gap formed between said cover plate and said ring, and a gap formed between said cover plate and said case for the hard disk drive unit are sealed by said gasket.
